

# SOAP Note

Date: 8/28/2025, 11:11:48 PM

Clinic: Demo Clinic

Clinician: J. Nadelberg, MD

Specialty: Cardiology

## Subjective

Chest pain radiating to L arm for 3 days, exertional dyspnea. Patient reports significant quality of chest discomfort.

## Objective

HTN (140/90 mmHg), tachycardia (98 bpm), and tachypnea (20 breaths/min).

Vitals: BP=140/90, HR=98, RR=20

Labs: Troponin=Not provided

## Assessment

ACS risk is high due to family history of MI at 52, smoking status, and exertional dyspnea. ECG and troponin results are pending.

## Plan

Continue monitoring for worsening symptoms. Order ECG and troponin tests as soon as possible to rule out ACS.
